

# Comprehensive services for information security and data protection

## ISO-27001 and TISAX® Audit

---

TRUSTED INFORMATION SECURITY ASSESSMENT EXCHANGE

## Why is information security so important?

---

**Information security serves to protect against dangers and threats, avoid financial losses, and minimize risks.**

Protect yourself from information theft, espionage, as well as liability and business risks.

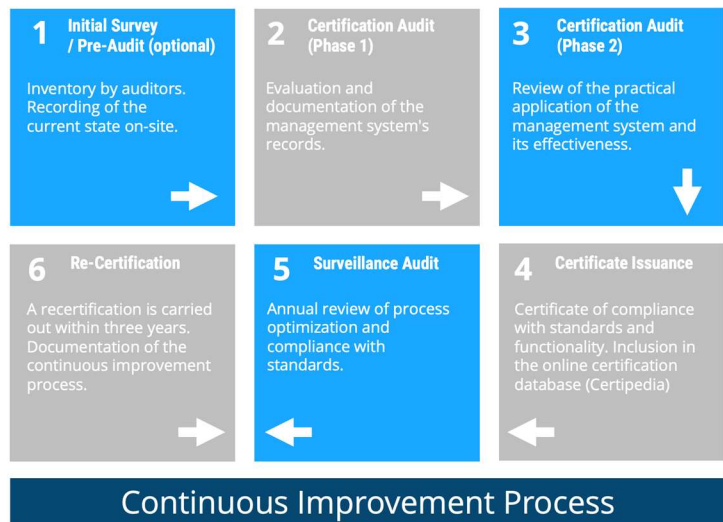

Build trust with your business partners and leverage the economic benefits of certification.

### **Take advantage of the benefits:**

- Effective protection of your information, data, and business processes
- Risk and opportunity optimization by identifying and eliminating weaknesses in handling information
- Promoting security awareness among your personnel
- Proof of trustworthiness to customers, business partners, and investors
- Continuous improvement of your IT processes
- Cost reduction by preventing security incidents

## Reduce your risks. The four fundamental risks are:

- **Violations of data protection regulations**  
If personal data falls into the wrong hands, the responsible supervisory authority may impose a hefty fine.
- **Loss of non-personal data**  
The loss of other data can also result in significant damage, e.g., if trade secrets are leaked to competitors. Small and medium-sized enterprises are particularly frequent targets of industrial espionage.
- **System failures and damage**  
Some cybercriminals deliberately cause damage to IT systems and associated devices to extort payments. This can result in outages and reduced productivity. Depending on the extent of the damage, costly repairs may be necessary.
- **Reputational damage**  
If the public becomes aware of such incidents, it can severely harm the company's reputation. It is essential to note that certain incidents (especially involving personal data) must be reported.
- 

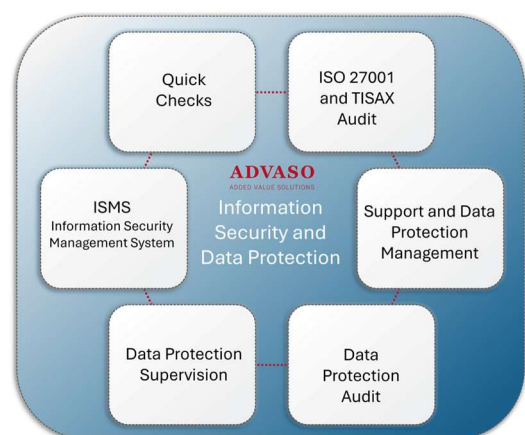

## ADVASO helps you make the certification process cost-effective and efficient.

Targeted and straightforward preparation for ISO-27001 certification through:

- Setting up ISMS systems utilizing your existing infrastructure by ISO 27001-certified senior internal auditors and supporting the creation of necessary documentation.
- Preparing internal audits with ISO 27001-certified auditors.
- Conducting internal audits (and annual follow-up audits) with ISO 27001-certified auditors.

ISO-27001 and TISAX® audit preparation is integrated into our solution portfolio on information security and data protection.

## Pricing

---

### Quick Check

---

Determination of the individual status in relation to:

- Status quo vs. target objectives
- Requirements (internal/external)
- Desired certification level

Procedure and activity plan for individual implementation.

**Pice: free**

---
